Career Objective

Motivated AI & Data Science undergraduate seeking an in AI Engineering or Data Analytics. Skilled in AI agent development, machine learning, data pipelines, and visualization. Passionate about using data-driven insights and intelligent workflows to solve real-world problems

Education

Sri Shakthi Institute of Engineering and Technology of coimbatore, BTech in Artificial and Data Science Sept 2023 – May 2027

- GPA: 8.5/10.0
- **Coursework:** Artificial Intelligence, Data Analysis & Visualization, Big Data & Cloud Computing.

Experience

Data Science Intern, Internz learn – coimbatore Sept 2024 – Oct 2024

- Developed data pipelines and predictive models to automate decision-making workflows.
- Performed EDA, feature engineering, and compared ML models (Regression, Clustering).
- Delivered business insights and documented results for reproducibility.

Publications

AI-POWERED HANDWRITTEN NOTES DIGITIZATION USING NLP AND DEEP LEARNING April 2025

Malini, *Jones Geneva*, Priyadharsini, Rakshani

Projects

Blinkit Data Analysis github.com/repo

- This project is focused on analyzing Blinkit's retail dataset to derive actionable business insights.
- Tools Used: sql, power BI

AI Meeting Intelligence System github.com/repo

- Built a multimodal Gen AI pipeline using OpenAI Whisper (speech-to-text), Llama 3.3 70B via Groq API (auto-generates meeting summary, action items and key decisions), and TextBlob (per-speaker sentiment analysis) — deployed live on Streamlit Cloud.

Lexora — AI Legal Assistant github.com/repo

- Built Lexora, an AI legal assistant for Indian law using RAG (FAISS + Sentence Transformers), BART summarization, and case prediction with TF-IDF + Scikit-learn, served via FastAPI.
- Integrated locally-hosted TinyLlama (Ollama) for legal Q&A with a Streamlit UI, supporting semantic IPC search, clause analysis, and ML-based verdict prediction.

Technologies

Programming languages: C, Python (NumPy, Pandas, Matplotlib, Seaborn).

Techstack: Data Science, Machine Learning, AI Agents, MLOps, DBMS.

Tools: Git & GitHub, VS Code, Jupyter notebook.
